

Children's National™

Postdoctoral Fellowship in Pediatric Neuropsychology

Children's National Health System
Washington, DC and Rockville, MD

Training at Children's National

We offer two-year, full time fellowships in pediatric neuropsychology. Our training combines clinical, didactic, and research activities to prepare you for a career in clinical-academic neuropsychology. We are a member of the *Association of Postdoctoral Programs in Clinical Neuropsychology (APPCN)* and our program is designed to conform to guidelines set forth by the INS-APA Division 40 Task Force and the Houston Conference on Specialty Education and Training in Clinical Neuropsychology.

The patient population at Children's National is culturally diverse, providing fellows with the opportunity to work with families from a variety of backgrounds. Fellows work with children and adolescents with a wide range of complex developmental and medical/ neurological disorders. We are based in an outpatient medical setting. Referral questions most often relate to the child's profile of cognitive strengths and weaknesses, diagnostic concerns, and educational and therapeutic program planning. Many rotations include a focus on multidisciplinary interactions. At Children's National, we are particularly known for expertise in mild TBI/ concussion, autism spectrum disorders, and the effects of medical and developmental disorders on executive functions. Development of assessment tools and research-based treatments are also areas of unique strength. We are deeply committed to training.

Our faculty and fellows are involved in grant-funded *clinical research*, and our team contributed over 20 publications last year within high impact, peer-reviewed journals. Our neuropsychology faculty members are leaders in the field, serving as grant reviewers, chair and committee members, and panel experts for national and international societies, research consortiums and foundations. This high level of expertise, combined with our location in the Washington DC area, uniquely positions us for involvement in *legislative advocacy* related to issues such as mild TBI in children and autism spectrum disorders. Several faculty members have attained or are currently pursuing board-certification in neuropsychology (ABPP/ABCN).

About Children's National Serving the nation's children since 1870, Children's National is a leading clinical and research institution, and is the only exclusive provider of pediatric care in the metropolitan Washington area. We are ranked among the best children's hospitals in the country. Children's National offers services at the main hospital in the District of Columbia and at regional satellites throughout the DC area. The Division of Pediatric Neuropsychology has its main office at a regional outpatient center in Rockville, Maryland, and also serves children at the main hospital and at additional satellite locations in Maryland and Virginia. See www.childrensnational.org for more information.

The atrium of Children's National – main hospital campus

Training Tracks

We have openings in three training tracks this year. Applicants are welcome to apply for multiple tracks. Please note that all tracks offer general neuropsychological training with a range of populations and prepare fellows for a career that blends clinical, research, and training activities. Tracks 2 (Concussion) and 3 (Autism) additionally offer the opportunity to specialize in a rapidly-expanding and highly marketable area of pediatric neuropsychology. The tracks overlap in the experiences available, but differ in emphasis (percent time in different rotations) and research focus.

Track 1: Pediatric Neuropsychology / General

Match Number 8803 – One opening.

This track provides broad, general training in pediatric neuropsychology service to children and adolescents. The fellow receives exposure to a wide range of pediatric populations, with a balance between neurodevelopmental (e.g., ADHD, learning disabilities, autism spectrum disorders) and medical/ neurological disorders (e.g., epilepsy, brain tumors, leukemia, concussions and other injuries). Patients are usually school-aged through late adolescents, with opportunities to see preschool-aged patients according to the fellow's interests. Clinical experiences provide opportunities to develop facility with: battery selection and administration; focused history taking and process-driven behavioral observations; case formulation; provision of feedback; report writing; work with multidisciplinary teams; and consultation with schools. In this track, fellows see patients from the General Outpatient Service (about half of patients) and specific rotation-related populations (see Clinical Experiences, below, for a description of rotations and an example of a 2-year rotation plan). Typically, two days per week are spent providing evaluations. The fellow will also actively engage in research and will have a day a week of protected time for this. Possible areas of research in this track include hematology/ oncology, congenital heart disease, and epilepsy. There are particularly strong opportunities in epilepsy research in the coming year, but other options may be available depending on grant funding. A wide-range of didactic and professional development opportunities (described below) prepare the fellow for a variety of career opportunities in pediatric neuropsychology.

Track 2: Pediatric Neuropsychology/ Concussion and Mild Traumatic Brain Injury

Match Number 8805 – One opening.

The fellow in this track will receive general training in pediatric neuropsychology (similar to description for Track 1) and also will achieve expertise in working with children who have sustained mild traumatic brain injuries (mTBI)/ concussion. This fellow will be specially trained to provide evaluation, consultation and treatment through the Safe Concussion Outcome, Recovery & Education (SCORE) Program within the Division of Neuropsychology, under the direction of Gerry Gioia, PhD, one of the leaders in the field of pediatric concussion. The fellow will have the opportunity to work with a variety of medical professionals (e.g., emergency department, sports medicine, neurology, athletic trainers, physical trainers) regarding evaluation and treatment of mild TBI/ concussion. With faculty members, the fellow will be involved in providing brain injury education to schools, parents, medical professionals, and athletic programs and participate in community outreach activities.

In this track, approximately half of the fellow's clinical activities (i.e., one day per week) are through the SCORE clinic. The other half will be a mix of General Outpatient Service and specialty rotations (such as Autism, EF Clinic, Epilepsy, hematology-oncology; see descriptions below). The fellow in this track will have one day per week of protected time for research on the effects of mTBI in children and the development of new assessment techniques. Thus, the fellow who completes this track will be well-positioned to pursue a career in general pediatric neuropsychology and/ or to specialize in the rapidly-growing area of pediatric concussion.

Track 3: Pediatric Neuropsychology/ Autism

Match Number 8806 – One opening.

The fellow in this track will have a dual focus on becoming a broadly-trained pediatric neuropsychologist, while also developing specialty expertise in the evaluation and treatment of children with high-functioning Autism Spectrum Disorders (ASD). Previous experience working with children with autism is required. Fellows in this track provide evaluations with children from one year of age through young adulthood in the Center for Autism Spectrum Disorders (CASD). Many evaluations are within the context of multi-disciplinary teams (with psychiatrists, speech/ language pathologists, and developmental psychologists). In this track, the fellow will also have the opportunity to provide individual and/ or group treatment to children with high-functioning ASD, and will be trained in using gold standard diagnostic measures, the ADI and ADOS. In addition to autism specialty training, the fellow will pursue broader training opportunities in neuropsychological assessment and consultation through the General Outpatient Service and specialty rotations (described below). In the first year, the majority of the clinical work is through CASD. In the second year, the fellow will complete additional rotations (see below) to provide general training in neuropsychology, while also continuing to complete some autism-related assessments. The fellow will conduct research via several ongoing CASD projects, and will have protected time for research (one to two days per week). The CASD has federal grant funding in several areas, including an executive function school based intervention program for ASD and neuroimaging of executive functions in ASD. The fellow who completes this track will be well prepared for a career as a general pediatric neuropsychologist and/ or a specialist in the neuropsychology of autism spectrum disorders.

Dr. Gioia (2nd from right) was a panelist at the White House Youth Concussion Summit in May 2014.

Clinical Experiences

For fellows in both training tracks, approximately 45-65% of time is devoted to clinical work, which consists of a combination of general outpatient services and rotational or track-specific activities. Fellows typically complete the equivalent of two "clinic days" per week. A clinic day can follow various formats, such as a full neuropsychological evaluation, a more brief/ focused evaluation, or a day in concussion clinic seeing multiple new and follow-up patients. Fellows receive the assistance of our well-trained psychometrists, who administer and score a portion of the assessment, and also work with extern assistants (see Didactics and Professional Development Experiences, below). Fellows receive at least two hours of individual supervision per week, plus group supervision, with faculty involvement in cases tailored to the needs of the individual fellow to support growing independence. Fellows typically provide all of their clinical services at the Rockville office during their first year. During the second year, fellows will often divide their time between the Rockville office and the hospital campus in Washington, DC, to allow for completion of hospital-based rotations (e.g., epilepsy, hem-onc).

Clinical Rotations:

General Outpatient Service: All fellows spend a portion of their clinical time providing consultation and neuropsychological evaluation to our general service, which is for any referral for evaluation not coming through one of our specialty clinics/ services listed below. The proportion of general outpatients is higher in the General track (approximately half of clinical service, especially in the first year) and lower (approximately a quarter) for fellows in the Concussion and Autism tracks. Patients seen in the general outpatient service include children and adolescents presenting with a variety of developmental or acquired neurocognitive difficulties.

Specialty Rotations: Rotations are organized to provide broad experience with neurodevelopmental disorders and a variety of referral questions in Year 1, and in-depth experiences with medical populations (e.g., epilepsy, hem/onc) in Year 2. Fellows in the Concussion track will spend relatively more time in the SCORE clinic rotation, and fellows in the Autism track will spend relatively more time in autism-related rotations, including neuropsychological and developmental evaluations and treatment. However, all fellows can be exposed to most or all of these populations, and *we take individual preferences and goals into account in order to individualize the training experience*. Each rotation typically offers both didactic experiences (e.g., attending rounds) and experience with a given patient population.

Center for Autism Spectrum Disorders (CASD) – This rotation provides experience in evaluating primarily high-functioning children for autism spectrum disorders. The fellow will conduct neuropsychological evaluations and function as part of a multi-disciplinary team, which includes developmental psychology, psychiatry and speech and language pathology. Fellows receive individual and group supervision and participate in team meetings, including case presentations and didactics. Fellows have the opportunity to provide school and parent consultation. Fellows (particularly those in the Autism track) can also provide group, individual, and family therapy.

Comprehensive Pediatric Epilepsy Program – The fellow participates in weekly multidisciplinary epilepsy team conference in the Neurology

department, and provides consultation and evaluation for children and adolescents diagnosed with seizure disorders. The fellow will also follow surgery candidates through baseline assessment, possible Wada evaluation of language and memory functions, cortical mapping, and/ or functional imaging, and post-surgical evaluation.

Developmental Neuropsychological Evaluation – Evaluations (some as part of a multidisciplinary team) of preschool-aged children or those functioning at that developmental level, mostly referred to the Center for Autism Spectrum Disorders.

Executive Function Clinic – Our faculty are known for expertise in executive functioning. This clinic provides rapid, focused evaluations of children with suspected attentional and executive function problems. The rotation includes group supervision, and particular training in executive function profiles in ADHD and other neuropsychological disorders.

Hematology/Oncology Program - The fellow participates in clinical and neuroradiology rounds through the Hematology/Oncology and Neurology departments and learns about the cognitive sequelae of these disorders and their treatments. As part of the rotation, the fellow will provide consultations and evaluations to patients referred through the Hematology/Oncology and Neurology departments (Brain Tumor Institute). In addition, the fellow will also obtain clinical experience evaluating children with Neurofibromatosis (NF), and will provide consultation within the NF Institute.

Safe Concussion Outcome, Recovery & Education (SCORE) Program– This unique “primary care neuropsychology” clinic, situated within the Division of Pediatric Neuropsychology, conducts serial, focused neuropsychological evaluations with children who have sustained mild TBI/ concussions. Active treatment is also provided. The fellow will also provide consultation to physicians, teachers, athletic and physical trainers regarding school and return to play/ activity issues.

Research

Approximately 20% of the fellow’s time is protected for clinical research. Fellows are matched to an area of research based first on training track, but also funding availability and interest. Current research

programs focus on neurocognitive profiles of children and adolescents with developmental and acquired disorders including autism spectrum disorders, epilepsy, mild traumatic brain injury, cancer, genetic disorders (e.g., neurofibromatosis), and congenital heart disease. Several projects include neuroimaging (fMRI, DTI, MRS). The fellow is expected to be a productive member of his or her research team and to demonstrate competency for independent research after completing the program. For example, fellows are expected to present at professional conferences, and submit a review paper, chapter, research article, and/ grant application by the end of the residency. Our program includes a research curriculum and monthly research meetings/ seminars to support the development of research skills. Our postdocs are authors on numerous peer-reviewed publications, book chapters, and conference presentations. See below for examples of recent postdoc publications.

Didactic and Professional Development Experiences

Approximately 15-20% of the fellow’s time is devoted to didactics and professional development activities.

Weekly didactic meetings: These meetings rotate each week and include Division Chief’s Seminars (with Dr. Gioia), group supervision, research meeting, and meetings with the training director.

Neuropsychology Seminar: The weekly neuropsychology seminar series is designed to prepare fellows for professional practice and board certification in neuropsychology. It includes review of major topics in functional neuroanatomy and neuropsychological disorders, as well as legal and ethical issues and fact-finding case seminars.

Sample Neuropsychology Seminar Topics
Functional Neuroanatomy Review
Pediatric Epilepsy
Legislative Advocacy
Executive Function Intervention
Neurocognitive Issues in Brain Tumors and Leukemia
Introduction to Forensic Neuropsychology

Autism Seminar: Fellows participating in the autism rotation will attend a seminar series within the Center for Autism Spectrum Disorders. Fellows who are not currently on rotation are also welcome to attend.

Additional opportunities through the larger medical center include hospital Grand Rounds, Behavioral Medicine Grand Rounds, Neuroscience Seminar, Neuroradiology Rounds, Epilepsy team meeting, brain cutting, observing brain surgery, shadowing a neurologist, etc. Many of these meetings can be attended via video teleconference.

Teaching and Supervision Opportunities: The fellow will develop teaching and supervisory skills to prepare him or her for independent practice as a pediatric neuropsychologist within clinical and academic medical settings. Fellows develop their own supervisory skills with psychology externs and psychometrists. Fellows present topics in the neuropsychology seminar series, and may be asked to present in the Core Seminar Series for psychiatry trainees, and/or Psychology Intern Seminar or other presentations within the hospital. Fellows also regularly provide community education and outreach at the local level and beyond.

Faculty member Cat McGill with postdoc Maya Zayat (2013-2015) at the Youth Sports Safety Alliance in 2014

Sample Schedule for General Track Postdoc:

Rotation		Mon	Tues	Weds	Thurs	Fri
Year 1	Fall	Research	Concussion Clinic	General Didactics/ Supervision	CASD supervision & didactics, Team feedbacks, Writing	Autism Clinic or General Outpatient Clinic (alt. weeks)
	Spring		General Outpatient Clinic	Feedbacks		Autism Clinic or EF Clinic (alt. weeks)
Year 2	Fall	Feedbacks Writing	Epilepsy Case	General Didactics/ Supervision	Main Hospital: Epilepsy Team meeting; Research	Developmental Evaluation Clinic or General Outpatient Clinic (alt. weeks)
	Spring		Hematology/ Oncology Case	Feedbacks Extern supervision	Main Hospital: Research, hospital-based rounds/ didactics	

Salary/Benefits

Salaries generally follow the National Institutes of Health salary schedule and for 2015-2016 are as follows:

\$42,840 first year fellow

\$44,556 second year fellow

Children's National Medical Center offers an excellent benefits package. Postdoctoral fellows receive *four weeks of annual leave (vacation) per year*, and accrue sick leave. There are *nine paid federal holidays*. We provide a generous *professional expense budget* for conference travel, books, licensure fees, etc. The hospital offers a selection of health insurance plans, optional dental and vision coverage, flexible spending accounts, employee assistance program, back-up dependent care assistance, optional life and disability insurance. More information about hospital benefits is available at childrensnational.org/careers/benefits/. At our beautiful Rockville office, fellows have private offices with large windows, free parking, and free 24-hour access to an exercise room in the building. We maintain scoring and statistical analysis software, and through our academic affiliate, The George Washington University, offer excellent online access to library resources including full-text journals.

How to Apply

Qualifications of Applicants: We will consider applicants who have completed APA/CPA-approved doctoral programs in Clinical or School Psychology, and an APA/CPA-accredited predoctoral internship that includes a major rotation in pediatric neuropsychology (preferably near 50% time). Applicants should have prior training in neuropsychological assessment, and an established focus (in graduate coursework, training, and career goals) on working with children and adolescents. Our postdoctoral fellows are expected to be productive members of their research team, and as such, candidates should have completed an empirical dissertation, and formal coursework in statistics and research methodology, as part of their graduate program. Strong skills in statistical analysis are highly desirable.

Application Procedure: Children's National is a member of the Association of Postdoctoral Programs in Clinical Neuropsychology (APPCN) and participates in the APPCN Resident Matching Program (the "Match") administered by the National Matching Service. All applicants must register with the National Matching Service. Information can be obtained from APPCN (www.appcn.org) or NMS (www.natmatch.com/appcnmat or 416-977-3431). This residency site agrees to abide by the APPCN policy that no person at this facility will solicit, accept or use any ranking-related information from any residency applicant.

Rockville office of the Division of Pediatric Neuropsychology

Interviews for selected applicants will be conducted at the INS meeting in February. Note that the traditional "Interview Day" for postdoctoral positions is the day before the INS conference begins (Tuesday). We will conduct many of our interviews that day, but a small number of slots will be

available later in the week for conference attendees. For applicants not attending the INS meeting, interviews can be arranged at our Rockville office instead.

Materials are due December 28, 2015. The following application materials are *required*. We will have an online portal for submitting your documents; please email npsypdoc@childrensnational.org to request the link. If you are unable to use the link for whatever reason, you may contact us about other ways to submit your materials.

Materials to be uploaded by the applicant:

- ☐ Cover Letter: Please indicate clinical and research interests, goals, and perceived match to our program/ track(s) of interest
- ☐ Curriculum Vitae
- ☐ Two de-identified assessment reports written by the applicant
- ☐ The Doctoral Training Verification Form (only required if your doctoral degree is not yet complete). This form is available from APPCN, and should be signed by your training director or dissertation advisor (<http://www.appcn.org/training.html>). It is also acceptable for this document to be sent directly from your director or advisor (via email or mail) if preferred.

Materials to be emailed or mailed from other sources:

- ☐ Three letters of recommendation sent directly (email preferred) from the recommenders. We do not accept letters sent by the applicant.
- ☐ Official graduate transcripts sent from your institution (by mail or email)

Letters of recommendation and transcripts should be sent to:

Laura Kenealy, PhD, ABPP-CN
 Division of Pediatric Neuropsychology
 Children's National Medical Center
 15245 Shady Grove Rd, Suite 350
 Rockville, MD 20850
 Email: npsypdoc@childrensnational.org
 phone: 301-765-5430
 fax: 301-765-5497

Questions? Contact Dr. Laura Kenealy at 301-765-5439 or LKenealy@childrensnational.org.

Neuropsychologists at Children's National have authored multiple assessment tools, a research-based program for children with autism spectrum disorders, and several apps for concussion recognition and response.

Our Faculty

Laura Anthony, PhD

Clinical Psychologist; Associate Director, Center for Autism Spectrum Disorders (CASD)

Interests: Autism Spectrum Disorder (ASD) diagnosis, ASD intervention, executive function, intervention research

Contact: LAnthony@ChildrensNational.org; 301-765-5438

Kathleen Atmore, PsyD

Developmental Neuropsychologist

Interests: ASD diagnosis in underserved communities, caring for children with autism in medical settings

Contact: KAtmore@ChildrensNational.org; 301-765-5455

Madison Berl, PhD

Neuropsychologist; Research Director, Division of Neuropsychology

Interests: Epilepsy, neuroimaging, plasticity of cognitive functions

Contact: MBerl@ChildrensNational.org; 202-476-2545

Angela Bollich, PhD

Neuropsychologist

ASD evaluation and treatment over the lifespan, executive function, language development and interventions

Contact: ABollich@ChildrensNational.org; 301-297-4036

Gerard Gioia, PhD

Neuropsychologist; Chief, Division of Neuropsychology; Director, SCORE Clinic

Interests: Concussion/ mild TBI, executive function, psychometric development

Contact: GGioia@ChildrensNational.org; 301-765-5430

Yael Granader, PhD

Neuropsychologist

Interests: ASD evaluation, Epilepsy, Tuberous Sclerosis Complex, executive function

Contact: YGranade@ChildrensNational.org; 301-765-5452

Kristina Hardy, PhD

Neuropsychologist

Interests: Pediatric oncology, Neurofibromatosis, ADHD, executive function intervention

Contact: KKHardy@ChildrensNational.org; 202-476-2514

Laura Kenealy, PhD, ABPP-CN

Neuropsychologist; Training Director, Division of Neuropsychology; Director, Executive Function Clinic

Interests: ADHD, executive function, learning disorders, cognitive function in medical disorders

Contact: LKenealy@ChildrensNational.org; 301-765-5439

Lauren Kenworthy, PhD

Neuropsychologist; Director, CASD

Interests: Non-social ASD phenotypes, genotypes, and treatment

Contact: LKenwort@ChildrensNational.org; 301-765-5441

Catherine McGill, PsyD

Neuropsychologist

Interests: SCORE/ Concussion, advocacy and community outreach, cognitive effects of medical disorders

Contact: CMcGill@ChildrensNational.org; 301-765-5446

Julie Newman, PhD

Neuropsychologist

Interests: SCORE/concussion, executive function, childhood cancers, learning issues in medically complex children

Contact: JNewman@ChildrensNational.org; 240-568-7017

Allison Ratto, PhD

Clinical Psychologist

Interests: Autism Spectrum Disorders, developmental evaluations, cultural factors in assessment; Spanish-language assessment

Contact: ARatto@ChildrensNational.org; 301-765-5596

Maegan Sady, PhD

Neuropsychologist

Interests: SCORE/ concussion, executive function, hematology/oncology, sickle cell disease

Contact: MSady@ChildrensNational.org; 301-765-5454

Jacqueline Sanz, PhD, ABPP-CN

Neuropsychologist; Assistant Training Director

Interests: Congenital heart disease, genetic and metabolic syndromes; Spanish-language assessment

Contact: JSanz@ChildrensNational.org; 202-476-5506

Leigh Sepeta, PhD

Neuropsychologist

Interests: Epilepsy, acquired brain injury, neuroimaging, plasticity of cognitive functions.

Contact: LSepeta@ChildrensNational.org; 202-476-5358.

John Strang, PsyD

Neuropsychologist

Interests: ASD evaluations, ASD intervention, executive function, intervention research

Contact: JStrang@ChildrensNational.org; 301-765-5447

Christopher Vaughan, PsyD

Neuropsychologist; Externship Co-Director

Interests: SCORE/concussion, neuroimaging, test/ measure development

Contact: CVaughan@ChildrensNational.org; 301-765-5433

Karin Walsh, PsyD

Neuropsychologist, Externship Co-Director

Interests: Hematology/Oncology (neuro-oncology), Neurofibromatosis Type 1, anxiety and cognition

Contact: KWalsh@ChildrensNational.org; 202-476-3923
