

# Do you have a child under the age of 17 months?

The ORBEX Study is a research study being conducted at Children's National to learn more about preventing wheezing and asthma in young children. The purpose of this study is to see if a medication can help prevent wheezing in infants who are at risk for developing asthma.

## Who is eligible for this study?

Infants who are under the age of 17 months and who meet ONE of the following requirements may be eligible:

- Have a diagnosis of eczema
- Have a parent who has or has had asthma

## Study Details:

- The study will last three (3) years.
- There will be 12 planned study visits and 26 planned study phone calls throughout the three years.
- You will give your child the study capsules for 10 days every month for the first two years of the study.
- Testing includes a physical examination and collection of blood, stool, and nasal samples.
